

Missouri Consumers Pay the Price For Health-Insurance Market Failure

- Wellpoint Inc.'s Anthem Blue Cross Blue Shield subsidiary, the state's biggest health insurer, holds 68 percent of the commercial market. Together with UnitedHealth Group Inc. they control 79 percent of the market.¹
- Health insurance premiums for Missouri working families have skyrocketed, increasing 76 percent from 2000 to 2007.²
- For family health coverage in Missouri during this period, the average annual combined premium for employers and employees rose from \$6,731 to \$11,852.³
- For family health coverage in Missouri from 2000 to 2007, the average employer's portion

of annual premiums rose 72 percent, while the average worker's share grew by 91 percent.⁴

- Between 2000 and 2007, the median earnings of Missouri workers increased 17 percent, from \$22,201 to \$26,037. During that time health insurance premiums for Missouri working families rose 4.4 times faster than median earnings.⁵

When a firm has more than a 42 percent share of a single market, the U.S. Justice Department considers that market to be "highly concentrated." This means that an insurer could raise premiums and/or reduce the variety of plans or quality of services offered to customers with impunity.⁶

ENDNOTES

¹AMA data in this report are based on combined enrollment in preferred provider organizations (PPOs) and health maintenance organizations (HMOs) in states and metropolitan statistical areas (MSAs) as defined by the U.S. Census Bureau. The AMA calculates market share by dividing an insurer's enrollment in a given product by the total enrollment across all insurers in a market multiplied by 100. Total enrollment is for commercial products only, including self-insured employer-sponsored PPO plans and individual coverage, and does not include Medicare, Medicaid, or Children's Health Insurance Program enrollments. Self-insured employer plans refer to PPOs only. Accessed at <http://www.ama-assn.org/go/competition2007>.
