

Oregon Consumers Pay the Price For Health-Insurance Market Failure

- Regence BlueCross BlueShield of Oregon, the state's largest health insurer, controlled 26 percent of the commercial market in 2008. Together with Providence Health & Services, they hold 52 percent.¹
- Local markets are more concentrated; in Medford, Regence BlueCross BlueShield of Oregon and ODS Health Plans together hold 74 percent of the commercial market.^{2,3}
- Health insurance premiums for Oregon working families have skyrocketed, increasing 85 percent from 2000 to 2007.⁴
- For family health coverage in Oregon during this time, the average annual combined premium for employers and employees rose from \$6,654 to \$12,321.⁵
- For family health coverage in Oregon from 2000 to 2007, the average employer's portion of annual premiums rose 77 percent, while the average worker's share grew by 111 percent.⁶

- From 2000 to 2007, the median earnings of Oregon workers increased 18 percent, from \$22,401 to \$26,444. During that time health insurance premiums for Oregon working families rose 4.7 times faster than median earnings.⁷

If one company holds more than a 42 percent share of a market the U.S. Justice Department would consider that market "highly concentrated."⁸ The U.S Justice Department uses a rating system based on market share to determine if a market is concentrated or highly concentrated. If the market is rated from 1,000 to 1,800, it is considered to be "concentrated." Markets rated higher than 1,800 are deemed to be "highly concentrated." This means that an insurer could raise premiums and/or reduce the variety of plans or quality of services offered to customers with impunity.⁹

ENDNOTES

¹AMA data in this report are based on combined enrollment in preferred provider organizations (PPOs) and health maintenance organizations (HMOs) in states and metropolitan statistical areas (MSAs) as defined by the U.S. Census Bureau. The AMA calculates market share by dividing an insurer's enrollment in a given product by the total enrollment across all insurers in a market multiplied by 100. Total enrollment is for commercial products only, including self-insured employer-sponsored PPO plans and individual coverage, and does not include Medicare, Medicaid, or Children's Health Insurance Program enrollments. Self-insured employer plans refer to PPOs only. American Medical Association, "Competition in health insurance: A comprehensive study of U.S. markets: 2008 update."

⁹The HHI is used by the Department of Justice and the Federal Trade Commission in anti-trust proceedings. The HHI is the sum of the squared market shares of each firm in the market. The more competitive the market, the lower the HHI. The less competitive the market, the higher the HHI. An HHI above 1,800 is rated "highly concentrated." An HHI between 1,000 and 1,800 is considered "concentrated." Accessed at <http://www.usdoj.gov/atr/public/testimony/hhi.htm>.
